Just as we have to take a cold shower every day, sometimes we have to take a cold shower on our computers. Today's jumpCPU is here to provide you with a fresh new perspective on sometimes the hardest challenge of computing: overclocking chips. Yesterday, we discussed the key points of overclocking Your [[CPU]]s. Today I illustrate how easy it can be. My core i7-760i got to a CPU temperature of 54 degrees Celsius courtesy of a new ASUS 990FX motherboard. When the i7-760i was illuminated, the P4V played the song "Running Around" from the Revolver album. The shadows were mine. Ironically, I would argue that this song is a great overclocker. The song has a tempo of 100 to 150 bpm, which means that the opposite track of "Running Around" also has a tempo of 100 to 150 bpm. By switching the overclock track to the opposite, the new overclock track runs back and forth with the beat. This causes the music to be played at a much higher frequency, meaning that it's "more" than 100-150 bpm, but it's known as "a beat." An old Kingston SLC400 DVD drive failed as a result. **Editor's decision:** Based on performance (speed) with the latest CC/LR5.2, manual sharpening is now faster than using automatic. After 5,000 manual sharpening tests, the average was 1.7 sec faster. BUT with the newest profiler beta (2017/4) available, it is faster than the 1.7 sec in Lr5.2; 1.6 sec. (saved JPEG/DNG output is still the same).

I see this new version for:

- * workflow for previews and QC * use of speed profiles when reviewing projects in a browser app (tested HK2 version)
- * was 5x faster than Lr4, 5x faster than 5.0, 5.0 faster than 5.0, NOOOO TOO SLOW! * saves my day, saves time, saves my mind from things not to do * my mind can wander now!
- * and I have both men and women who love being pleased beyond expectations -- in the true sense of the words

Photoshop and Lightroom have helped me reach for my own destiny -- so now I'm on the way!

When you switch the display mode to *RGB* (Red, Green, and Blue), you see the color of each pixel in the Photoshop window as a bright dot, each one a different shade of its own color. As colors combine, you see the spots of hue and intensity you'd expect, but usually you'll also see small blobs of secondary colors, called *blobs*, which contain spots of the primary colors *red*, *green*, and *blue* that blend in the hues you see. (Green or blue-green are rarely present as dominant colors, while magenta or green-magenta usually occur simultaneously with cyan or blue-cyan.) Blobs of magenta and cyan appear as separate, small purple or blue-red blobs. In images, blobs do not necessarily reflect the actual color of the source. The variability of color depends also on your display system—it's entirely possible to see a bluish blob even when it's actually mostly red or green. **Where to Find Them:** The Swatches tool is located in the Swatches Panel. If you don't see it, click in the Panel. From the Swatches Panel, click the button of the color you want to use to change the color of the pixels in your image. Select the *or to* options to access the **Edit** Swatch group in the "Swatch" category of the Swatches panel. From there, you can select any color you want to use for this image and save it as a new color swatch. **How to Use Them:** If you're dealing with a color you're very familiar with, you can simply select it in the Color dialog box, as you would with any other color, and it automatically changes the color content for every pixel in the image. e3d0a04c9c

The Smart Wrap Around with the Photoshop CC release marks a major milestone for Photoshop users, as it adds the ability to edit picture exposure and color while maintaining alignment. The original idea for the Smart Wrap Around is similar to the Histogram, which has been in Photoshop from the beginning, but now, with the Smart Wrap Around you can change the white balance without changing the exposure. This helps us to keep the right exposure without risk of overexposure. So we can shoot in light and adjust exposure in post for the best image quality. By default the Smart Wrap Around splits the histogram into easy to use areas to adjust exposure.
